54 IDENTIFYING HEAT-REFLECTIVE WINDSCREENS

- Engine: XXX
- Gearbox : XXX
- Basic manual : XXX

INTRODUCTION

All LAGUNA, SCENIC and MEGANE vehicles (hatchback version only) depending on model will be equipped with heat reflective windscreens in production or as an option.

When replacing a windscreen, it will first be necessary to identify whether it is a heat-reflective windscreen or a conventional tinted windscreen.

To do this, look for the markings on the vehicle windows.

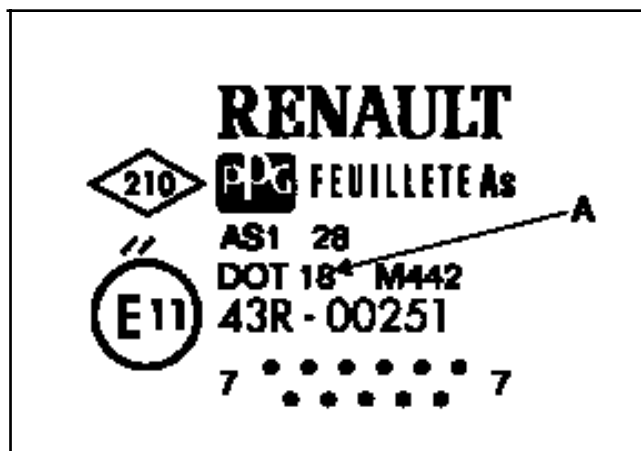

Compare these markings to the markings contained on the following page of this technical note.

NOTE : From October 1997, the heat-reflective windscreen fitted to the three vehicles quoted above will have a "3rd screen" etching which will easily enable this type of windscreen to be identified.

The methods for replacing this type of windscreen and for carrying out any impact repairs are identical to those for a conventional type windscreen.

For details on how to identify a heat-reflective windscreen fitted to the TWINGO, refer to Technical Note n° 438A (note not issued in UK).

IDENTIFICATION

Specific marking on heat-reflective windscreens fitted to the LAGUNA, SCENIC and MEGANE (hatchback version only) which can be identified by the mark at (A) "DOT 18".
